

# PRODUCT BACKLOG – CutWise IMS: Inventory and Scrap Management System

(OTTO Shoes/SOG Manufacturing Corporation)

| User Story ID                           | User Story                                                                                                                         | Acceptance Criteria                                                                                                                                                                                                                                                                                       | Priority (Sprint Backlog) | Requirements Reference | Revised Priority |
|-----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|------------------------|------------------|
| EPIC 1: AUTHENTICATION & ACCESS CONTROL |                                                                                                                                    |                                                                                                                                                                                                                                                                                                           |                           |                        |                  |
| US001                                   | As an Admin, I want users to authenticate before accessing the system so that only authorized personnel can access inventory data. | <div>1. User must enter valid username and password.</div> <div>2. System validates credentials before login.</div> <div>3. Invalid credentials display an error message.</div> <div>4. Successful login redirects user to dashboard.</div> <div>5. Session automatically expires after inactivity.</div> | SPRINT 1                  | FR-001, FR-018         |                  |
| US002                                   | As an Admin, I want role-based access control so that permissions are limited based on user roles.                                 | <div>1. System supports Admin, Co-Admin, Supervisor, and Inventory Clerk roles.</div> <div>2. Unauthorized users cannot access restricted modules.</div> <div>3. User permissions are configurable.</div> <div>4. Access restrictions are enforced system-wide.</div>                                     | SPRINT 1                  | FR-018                 |                  |
| US003                                   | As an Admin, I want audit trail logging so that all user activities are recorded for monitoring purposes.                          | <div>1. System records add, edit, delete, and configuration actions.</div> <div>2. Audit logs include username, action, timestamp, and affected module.</div> <div>3. Logs are viewable only by authorized users.</div> <div>4. Audit trail cannot be manually modified.</div>                            | SPRINT 2                  | FR-020                 |                  |
| EPIC 2: INVENTORY MANAGEMENT            |                                                                                                                                    |                                                                                                                                                                                                                                                                                                           |                           |                        |                  |

|       |                                                                                                                          |                                                                                                                                                                                                                                                                                |          |                |
|-------|--------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------------|
| US004 | As an Inventory Clerk, I want to add new raw materials so that inventory records remain updated.                         | <div>1. User can input material name, type, size, quantity, unit cost, and supplier.</div> <div>2. Required fields are validated before saving.</div> <div>3. Duplicate entries are prevented.</div> <div>4. Newly added material appears immediately in inventory list.</div> | SPRINT 1 | FR-001         |
| US005 | As an Inventory Clerk, I want to update existing material information so that inventory records remain accurate.         | <div>1. Authorized users can edit material details.</div> <div>2. Updated information reflects immediately after saving.</div> <div>3. Changes are logged in audit trail.</div> <div>4. System validates edited fields before update.</div>                                    | SPRINT 1 | FR-002, FR-020 |
| US006 | As a Supervisor, I want to view all inventory records so that I can monitor material availability.                       | <div>1. Inventory table displays material name, type, quantity, size, and status.</div> <div>2. Users can search materials.</div> <div>3. Inventory list supports filtering.</div> <div>4. Only authorized users can access inventory records.</div>                           | SPRINT 1 | FR-003         |
| US007 | As the system, I want inventory levels to update automatically so that stock records remain accurate after transactions. | <div>1. Inventory deducts automatically after material usage.</div> <div>2. Stock updates reflect in real-time.</div> <div>3. Changes are recorded in audit logs.</div> <div>4. Inventory balances cannot become negative.</div>                                               | SPRINT 2 | FR-004         |

|                          |                                                                                                                                    |                                                                                                                                                                                                                                                                  |          |                |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------------|
| US008                    | As a Supervisor, I want low stock alerts so that materials can be replenished before shortages occur.                              | <div>1. System detects materials below threshold.</div> <div>2. Email notification is sent to authorized users.</div> <div>3. Alert is visible on dashboard.</div> <div>4. Threshold values are configurable by Admin.</div>                                     | SPRINT 2 | FR-005, FR-017 |
| EPIC 3: SCRAP MANAGEMENT |                                                                                                                                    |                                                                                                                                                                                                                                                                  |          |                |
| US009                    | As the system, I want to record leftover leather materials from the cutting subsystem so that scrap inventory is tracked properly. | <div>1. Scrap entries are automatically received from Sales &amp; Cutting subsystem.</div> <div>2. Scrap details include source batch and material type.</div> <div>3. Scrap records are stored successfully.</div> <div>4. Integration logs are recorded.</div> | SPRINT 3 | FR-006         |
| US010                    | As an Inventory Clerk, I want scrap materials converted into kilograms so that scrap inventory is standardized.                    | <div>1. Scrap conversion records weight in kilograms.</div> <div>2. System calculates equivalent scrap value.</div> <div>3. Conversion history is stored.</div> <div>4. Invalid weight entries are rejected.</div>                                               | SPRINT 3 | FR-007         |
| US011                    | As a Supervisor, I want to view scrap inventory so that I can monitor reusable and sellable scraps.                                | <div>1. Scrap inventory displays material type, weight, price/kg, and status.</div> <div>2. Scrap inventory is searchable.</div> <div>3. Only authorized users can access scrap records.</div> <div>4. Scrap records update in real-time.</div>                  | SPRINT 3 | FR-008         |
| US012                    | As an Inventory Clerk, I want to record scrap sales so that scrap transactions are properly documented.                            | <div>1. User can input buyer details and weight sold.</div> <div>2. Scrap quantity deducts automatically after sale.</div> <div>3. Sales history is recorded.</div> <div>4. Sale transactions are logged in audit trail.</div>                                   | SPRINT 4 | FR-009         |

|                             |                                                                                                                  |                                                                                                                                                                                                                                                            |          |                |
|-----------------------------|------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------------|
| US013                       | As a Supervisor, I want profit analysis reports for scrap sales so that management can evaluate profitability.   | <div>1. System calculates total profit automatically.</div> <div>2. Profit reports display trends and summaries.</div> <div>3. Reports are accessible only to authorized users.</div> <div>4. Reports can be exported.</div>                               | SPRINT 4 | FR-010, FR-015 |
| EPIC 4: SUPPLIER MANAGEMENT |                                                                                                                  |                                                                                                                                                                                                                                                            |          |                |
| US014                       | As an Admin, I want to add supplier information so that supplier records are centralized.                        | <div>1. User can input supplier name, contact details, and address.</div> <div>2. Duplicate suppliers are prevented.</div> <div>3. Supplier list updates immediately after saving.</div> <div>4. Only authorized users can manage suppliers.</div>         | SPRINT 4 | FR-011         |
| US015                       | As a Supervisor, I want to view supplier information so that I can identify material sources easily.             | <div>1. Supplier records display contact details and materials supplied.</div> <div>2. Users can search suppliers.</div> <div>3. Supplier information is viewable only to authorized users.</div> <div>4. Supplier records are updated in real-time.</div> | SPRINT 4 | FR-012         |
| EPIC 5: REPORTS & ANALYTICS |                                                                                                                  |                                                                                                                                                                                                                                                            |          |                |
| US016                       | As a Supervisor, I want to generate inventory reports so that I can monitor stock movement and inventory status. | <div>1. Reports display current stock levels.</div> <div>2. Reports include low-stock materials.</div> <div>3. Reports are downloadable in PDF or Excel format.</div> <div>4. Reports are filterable by date range.</div>                                  | SPRINT 5 | FR-013         |

|                                  |                                                                                                                      |                                                                                                                                                                                                                                             |          |        |
|----------------------------------|----------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|--------|
| US017                            | As a Supervisor, I want to generate scrap reports so that scrap inventory and sales can be analyzed.                 | <div>1. Reports display scrap quantity and sales history.</div> <div>2. Reports include total scrap sold and remaining scrap.</div> <div>3. Reports are downloadable.</div> <div>4. Reports support date filtering.</div>                   | SPRINT 5 | FR-014 |
| US018                            | As a Manager, I want profit analysis dashboards so that I can evaluate operational performance.                      | <div>1. Dashboard displays scrap profit trends.</div> <div>2. Charts and graphs are visible.</div> <div>3. Reports update automatically.</div> <div>4. Access is restricted to management users.</div>                                      | SPRINT 5 | FR-015 |
| EPIC 6: SETTINGS & CONFIGURATION |                                                                                                                      |                                                                                                                                                                                                                                             |          |        |
| US019                            | As an Admin, I want to configure general system settings so that operational preferences can be managed centrally.   | <div>1. Admin can update company name, currency, and measurement units.</div> <div>2. Changes apply system-wide.</div> <div>3. Configuration updates are logged.</div> <div>4. Unauthorized users cannot modify settings.</div>             | SPRINT 6 | FR-016 |
| US020                            | As an Admin, I want to configure low stock thresholds so that notifications follow company standards.                | <div>1. Admin can define threshold values per material.</div> <div>2. Threshold changes save successfully.</div> <div>3. Updated thresholds affect future alerts.</div> <div>4. Changes are recorded in audit logs.</div>                   | SPRINT 6 | FR-017 |
| US021                            | As an Admin, I want to manage user accounts so that authorized personnel can access the system based on their roles. | <div>1. Admin can create, update, deactivate, and reactivate users.</div> <div>2. User roles determine accessible modules.</div> <div>3. New users receive login credentials.</div> <div>4. User management actions are audit logged.</div> | SPRINT 6 | FR-018 |
